

Product innovation is what defines Apollo, as a global leader in abrasive blasting solutions, we take great pride in the years of knowledge and expertise that our team possess. We take great pride in our patented and patent pending technology, which puts our products at the forefront in our industry across the globe.

Apollo's products are protected by both granted patents and patent pending status around the world. Apollo is constantly evolving and developing innovative solutions for the abrasive blasting industry, in addition to this list of patents and applications:

Apollo Blasting, International Patents, (Granted & Pending):

Apollo Dual Induction Blasting System: PCT/EP2020/058157

Apollo Blasting Ltd own the global patent on the world's first commercial non-pressurized abrasive blasting system, incorporating world first dual induction abrasive blasting technology.

Apollo Dual Induction Vortex Nozzle: GB2307815.7

Apollo Blasting designed and invented the world's first "vortex" nozzle, used in conjunction with Apollo's dual induction flow technology to create a unique vortex within the cobra blasting nozzle, offering unparalleled blasting performance, and a "soft blast" effect on substrates, created for our customers using Apollo systems in delicate restoration work, Apollo now fit their vortex nozzle as standard on all blasting systems!

Apollo Cobra Blast Nozzle: GB2404120.4

Harnessing the best of Apollo's research & development, Apollo's cobra blast nozzle features world first abrasive blast nozzle technology, featuring it's unique "fusion nozzle" and vortex outlet, that enables supersonic blast cleaning, the first of it's type for the abrasive blasting industry.
